

All pure and organic cheese products produced by Cheese Merchants of America are made without ingredients containing “Genetically Modified Organisms”. Our Approved Supplier Program helps us to maintain documents from our suppliers on the status of their raw materials including milk, enzymes, cultures, salt, and powdered cellulose. This is how we ensure that our final pure and organic cheese products are GMO free. However, since Cheese Merchants does **not** test finished products for the presence of GMOs, we do not label the product as “GMO Free”.

Please note: Any of our STYLE or BLEND items containing imitation cheese ingredients also will include corn starch. According to our imitation cheese supplier, the corn may have been genetically engineered. Therefore, these BLEND and STYLE items which contain “imitation ingredients” maintain the status of “may have been produced with ingredients that are genetically engineered”.

Sincerely,

A handwritten signature in cursive script, reading "Paul J. DeLigie".
